Gate valve series

High-New Technology Enterprise of China,National valve standard authorized unit

About Wuzhou

High-New Technology Enterprise of China,National valve standard authorized unit

www.wuzhou-valve.com

The company was established in 1978, which is a technological professional valve manufacturer. Presently it covers 12100m² including building space of 88900m², and owns 585 employees involving 82 senior & intermediate technicians. Also it developed CAD & CAM designing and ERP Planned Administration System of Enterprise's Resource. In addition, the company is in possession of fixed assets of RMB 380,000,000.00 Yuan (about USD 48,717,948.00) with advanced equipments such as processing center, numerical machine-tools and metal-machining facility, valve comprehensive performance test equipments consisting of physicochemical inspection NDE facility and spectral analysis, and has ability of fugitive emission test. It is a council unit of China Valve Association, Zhejiang Provincial High & new-tech Enterprise, Key High & new-tech Industrialized Unit of Zhejiang Province and Technology Advanced Enterprise. The company has acquired ISO 9001 certificate (the current version is ISO 2000) from DNV (Det Norske Veritas), ISO14001 Certificate of Environment Management System Certification, OHSAS Occupational Health and Safety Management System API-6D certificate issued by

American Petroleum Institute and CE certificate issued by TÜV. Moreover, it is the printing supply member unit of China Petrochemical group Material Equipment Co., China Petroleum & Natural Gas Group Co., and Shanghai Baoshan Iron & steel plant. The hard-sealed high-temp serial ball valves won the international invention Urike Gold Prize, national patent and was authorized as Grade I advanced products and National key project products by National Science & technology Ministry, the variable eccentric butterfly valve won the Gold prize of patent new products and the gate & globe valves have been approved as Grade I products by National Technology Surveillance Bureau.

The company provides high & medium pressure ball valves, butterfly valves, parallel gate valves, gate valves, globe valves, check valves and power station valves for petroleum, chemical engineering, metallurgy, light industry, power station, city building, water supply system, oil transportation, gas feeding, natural gas and long distance transportation pipes projects. In addition, the company supplies over 1000 sorts (8 main catalog) of non-standard and special valves, some of whose parts are imported from other countries. The products diameter range is NPS 1/2" ~120", the nominal pressure range is Class150-2500, and the operating temp. range is -320F~1380F. The valve material contains carbon steel, brass, stainless steel (heat-resist alloy steel), Monel, low-temp steel and other special steels. The driving device includes lever operator, electric driving,

Human resource

The enterprise's development bases on talented person. The talented person is the support for enterprise's development, is ultimate guarantee to keep enterprise impregnable. Wuzhou Pays great attention to introduce and train talented person, attach importance to inspire and develop talented person. It still insists the principle of both ability and integrity for many years, selects middle age and youth knowledge, ability, enterprise and work spiritual cadres with high political responsibility sense and historical urgency sense, enrich all levels of management. Wuzhou has held large scale talented person inviting meeting successively for many times, developed talented person training project in the enterprise. In the talented person resources development, omnidirectionally trains century talented person team correspond with development in every effort, multi-level, multi-channel, and the multi-patterns.

The enterprise carries out comprehensive informative source planning management system ERP completely.

Brace up national manufacturing industry is the hot topic in nowadays. At present, our state's manufacturing industry is facing austere position, the general level has great distance with developed countries. It has become one of keys to restrict 21 centuries' economic development. Meanwhile, internationalization market competition is fierce and fierce, many of our national manufacturing industries come across unprecedented difficulty. Exerting modern information technique to change and upgrade manufacturing industry is the developing road which with the situation of our country. Nowadays, the world has entered into informative times and stride to knowledge economic times. Taking information technology as leading high-tech to provide great support for manufacturing industries' development, and to impel the manufacturing industries' reform and the development. In recent years, Wuzhou Valve Company was experiencing span type development, already comprehensively implement synthesis informative resources plan management system ERP. Using modern information technology to transform and promote valve manufacturing industry combine informative and industrialization, further transit to modernization, realizes span type development in the short time to enhance productive forces.

Advanced Manufacturing Instruments Create Perfect Quality

Own high precise numerical control lathe and processing center, advanced equipments and testing instruments, polish technology and strict & perfect quality managing system, collect the science & technology team with professional technique elite and leading level, take full advantage of new technique new technology and new material to ensure stability and credibility of products. The quality of products is sourced from advanced manufacturing method and excellent consciousness source from continuous innovation.

As Wenzhou and even national big size valve enterprise, Wuzhou Valve takes quality as the life of company, ensures advanced and credible quality of products through adopting advanced producing technique and technology, perfect producing and testing equipments.

1. Make use of advanced plasma overlaying welding to ensure seal performance and use life.
2. Make use of perfect equipment to do heat treatment to components to make sure use life and performance.
3. Adopt computer control equipment to ensure veracity and speed of pressure test.
4. Adopt advanced production line to make sure the quality of batch at the meanwhile of improving producing efficient.

**Take strict testing as guarantee,
improve grade as object**

Chemical analysis

PMI Testing

Digital pressure testing

Fugitive Emission testing

Pressure Testing

Y-Ray Testing

Wuzhou does strict test to every product. The high responsibility of checker is dissolved to every component, plus the most advanced testing equipment and strict scientific management to make every

product endure customers' picking. Wuzhou human promises every product leaving factory is eligible. That is the secret of salable for Wuzhou product.

Gate Valve Series

High-New Technology Enterprise of China, National valve standard authorized unit

08 Bolted bonnet

15 API 600 gate valve

09 Model illustration

20 API 600 pressure seal gate valve

11 Structure

24 ASME Class-150/300/600/900/1500/2500

12 Type selection

26 API 602 forged steel gate valve

Bolted Bonnet

Body and bonnet

The body and bonnet are cast with uniform section and generous radius fillets to prevent stress concentration. The castings are precision-machined for high performance.

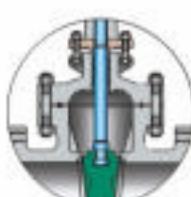

The gate valve body has a straight through port with cut recesses except at the seat area. This ensures minimum turbulence, erosion and resistance to flow. Long integral guide ribs in the body match with guide slots in the wedge for accurate alignment and guidance. Bonnet castings are of one-piece design, where the yoke is integral with the bonnet for gate valves of sizes up to 12" (300mm). This ensures accurate alignment of stem and a smooth operation.

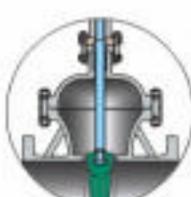

Body-bonnet joint

The body-bonnet joint for Class 150 gate valves is oval in shape, while for Class 300 and for globe valves, this joint is circular in shape. In 2" (50mm) valves, the body-bonnet joint has a square configuration. Gate valves of Class 150 rating have a flat-face joint with a graphite gasket having metallic inserts. Those of Class 300 rating have a male-female type joint with a spirally-wound gasket. Gate valves of Class 600 rating and above have a Ring Type Joint (RTJ).

Globe and Check valves in Class 150 and 300 ratings have a male-female type joint with a spirally-wound gasket. Those of Class 600 rating and above have an RTJ.

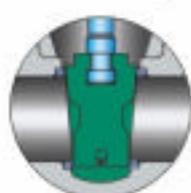

Square joint

Circular joint

Flexible wedge

All gate valves feature a one-piece cast flexible wedge that minimises stress concentration. Wedge flexibility ensures tight sealing over a wide range of differential pressures and temperatures. It also adjusts to slight misalignments caused by pipeline deflections and thermal deformation. The stem-to-wedge thrust is applied close to the wedge centre. This reduces lateral stem loading and provides for more accurate wedge movement.

Types of end connections

Types of end connections: raised face flanged ends, flat faces flanged ends, ring joint type flanged ends, welding ends butt weld, threaded, socket weld and combined ends and so on. We can manufacture per the reques by clients.

The buttweld ends in standard valves are machined in accordance with ASMEB 16.25, the customer should be clearly specify the pipe wall thickness.

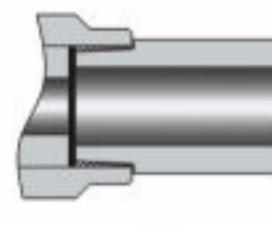

Flanged ends: RF

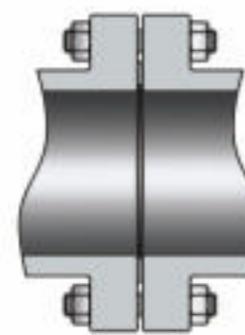

Flanged ends: RTJ

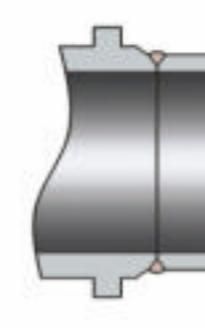

SW

NPT

Flanged ends: FF

BW

Structure

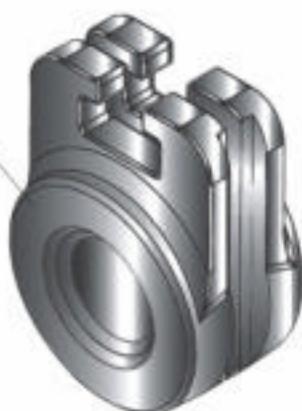

Flexible wedge

Body a guides provide a close tolerance control o the Wedge to minimize seat rubbing when closing.

Stem to wedge connection is self aligning to prevent side loads.

One piece flexible type wedge with weld deposited stellite No.6 facings. A flexible wedge insures pressure tightness. Prevents wedge form sticking and reduces operating torque needed to open valve. It also offers less resistance to unseating due to temperature changes.

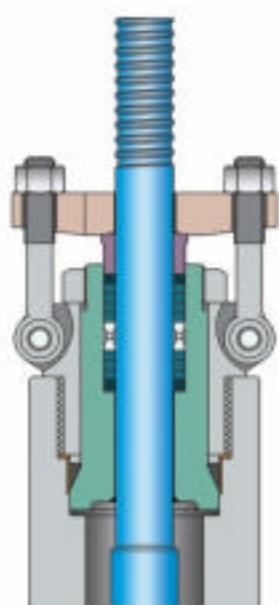

Trims

The walworth standard trim is API No.5 (HF) where the sealing surface of the gate and the seat sealing surface is overlaid with stellite No.6.

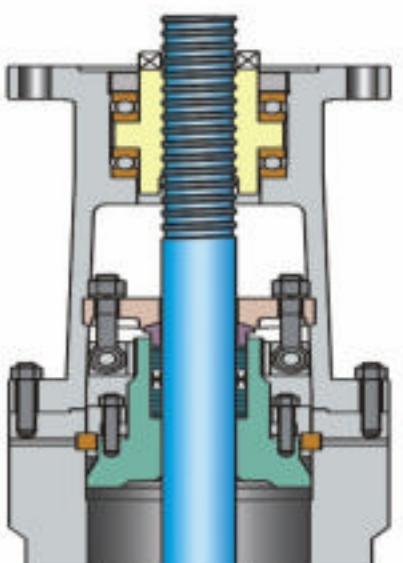

Walworth can furnish valves with a variety of trims and materials to meet the customers requirements for an optimum service life.

All walworth pressure seal valves are designed in accor-dance with API 600 style a and tested in accordance with API 598. As well as to special customer requirements.

Pressure seal bonnet

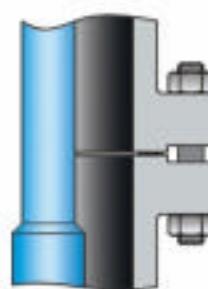

Size: 1/2"~4"

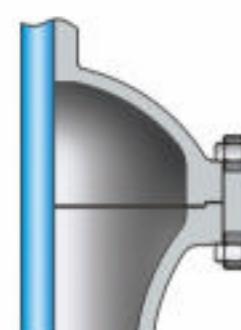

Size: >4"

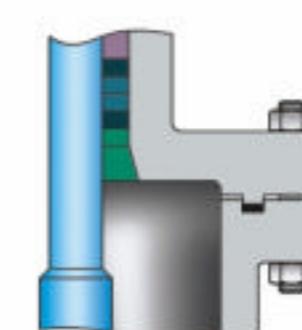

Gasket type for bolted bonnet

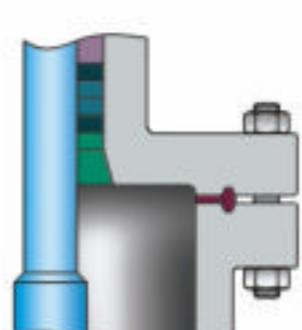

Smooth ellipse composite gasket Class 150Lb

Half-groove spiral wound gasket Class 300Lb

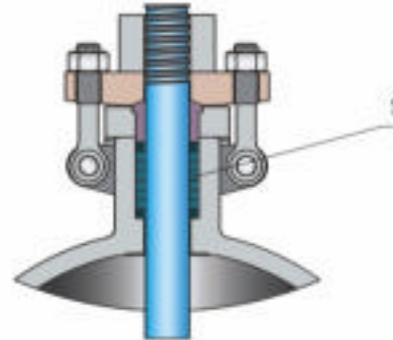

Full-groove spiral wound gasket Class 600Lb

Octagonal ring gasket & oval ring gasket Class 900-1500Lb

Type Selection

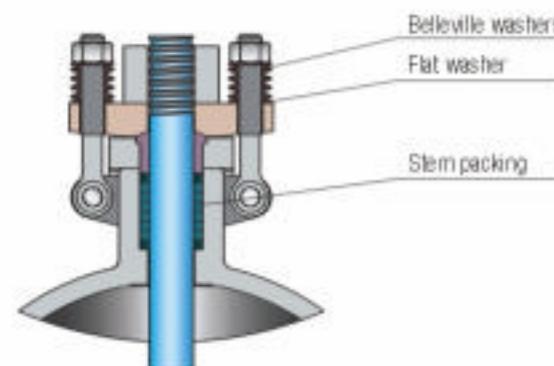

Standard stem packing system

Valves are designed, manufactured and tested to meet 50 PPM VOC fugitive emission leak rate as standard off the shelf valve. This applies to all gate valve, both Cast Steel and Forge Steel, Except the special requirement from clients.

The long term low emission stem sealing ability of our packing is enhanced by reduced diametral clearances and close control of stem straightness and packing sealing surface finish.

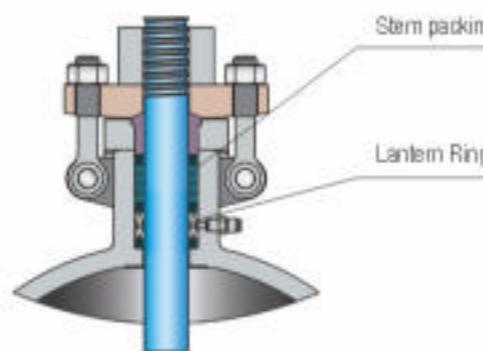

Live loading stem packing system

We can also provide gate valve with a stem packing live loading system for installations requiring frequent valve operation and/or having large variations in temperature/ pressure or where it is desirable to eliminate the need for occasional adjustment of the packing to compensate for the variations in operation. Live loading will provide a constant compression against the packing to maintain the optimum seal over a long period of time and variations in the operating conditions.

We can also supply valves with stem packing of different types and materials to meet the customer requirements.

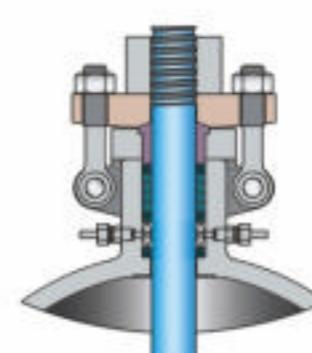

Lantern ring

The system can be provided with a stem packing/lantern ring combination of packing above and below the lantern ring to provide the ability to condense/ vent material being processed.

The system can be utilized to lubricate the packing or to drain/purge the stem area to a leakage recovery system when liquids/gasses cannot be released to the atmosphere.

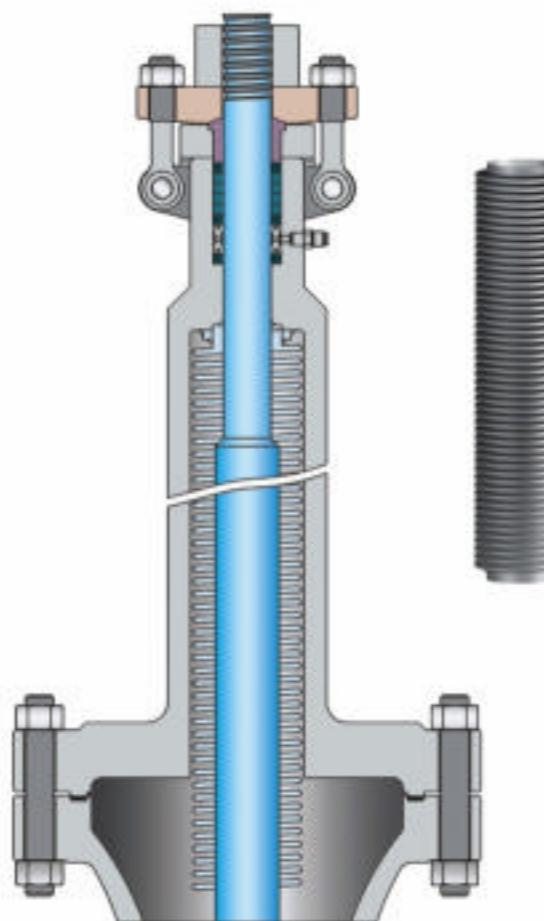

Water seal

The packing box which we provide have the water-sealing construction, when the inlet put the water in pressure of 0.6-1.6Mpa, the friction is small. The sealing is good, it can make the system separate with air and keep the good tightness.

Structure

Bellow seal valve

Valve with bellow seal can ensure stem packing seal complete no emission during the full course of using. Prevent any loss of medium, the most important is this structure can avoid environment pollution and people hurt for the service leakage.

Valve with bellow seal can avoid stem emission from the abrasing, corrosion, aging of packing, then can avoid frequent work arise from adding packing, replace packing, or compact packing.

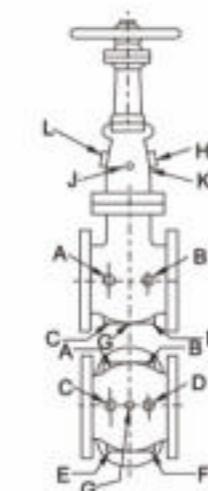

Bypass,drain and vent connections

A bypass line can be furnished with cast steel valves for equalizing pressure around the main valve or for warming up the line before opening the main valve.

Drain connections are normally located in the valve body to drain the valve when internal inspection or maintenance is required.

A vent connection can be located in the valve bonnet to relieve an over-pressure that could occur due to an expansion of trapped liquid.

MSS SP-45 lists the standard locations and connection sizes for gate valve.

Nominal Size Of Valve	Size Of Bypass
4"	1"
5" to 6"	1 1/4"
8" to 10"	1 1/2"
12" to 14"	2"
16" to 20"	3"
24" to 30"	4"
36" to 42"	6"
5" and larger	8"

Nominal Size Of Valve	2" to 4"	6" to 8"	10" and larger
Size Of Bypass-Drain-Vent	1/2"	3/4"	1"

Bellow seal valve

Pressure balancing valve can balance the pressure from pipe & inlet body.

API 600 Pressure Seal Gate Valve

API 600 Pressure Seal Gate Valve

Main features

Main parameter specification

Design and manufacture: API 600(BS 1414, DIN3352)

Face to face dimension: ASME B16.10

Range connection dimension: ASME B16.5 NPS≥26 PER ASME B16.47

Bor connection dimension: ASME B16.25

Test and inspection: API 598

Main material

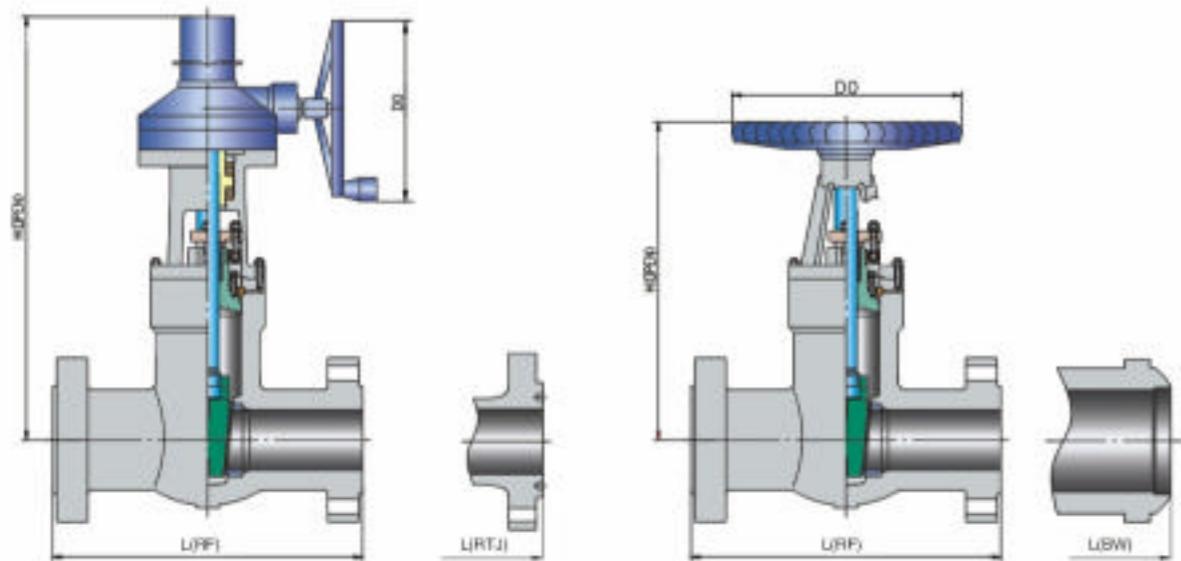

No.	Part Name	Material
1	Body	A216-WCB, WCC, A217-WCB, WCB, C5, C12, A351-CF8, CF8M
2	Seat	A105, A182-F11, F22, F304, F316
3	Wedge	A216-WCB, WCC, A217-WCB, WCB, C5, C12, A351-CF8, CF8M
4	Stem	A182-F6, F304, F316, 4140, 4340, 17-4PH
5	Bonnet	A216-WCB, WCC, A217-WCB, WCB, C5, C12, A351-CF8, CF8M
6	Sealing ring	A182-F304L, F316L
7	Thrust ring	A182-F6, F304, F316
8	Segment ring	A182-F6, F304, F316
9	Retainer	1025, A182-F304
10	Lantern ring	A276-T410, T304, T316
11	Nut	A194-2H, 4, 8
12	Bolt	A193-B7, B16, B8
13	Stem packing	Braided graphite and graphite
14	Gland	A276-T410, T304, T316
15	Gland flange	A216-WCB, 1025, A351-CF8
16	Nut	A194-2H, 8
17	Gland eyebolt	A193-B7, B8
18	Yoke	A216-WCB, A351-CF8
	Sealing face	STL/STL, 13%Cr/STL
